

HELPING UK GOVERNMENT DELIVER ONLINE EXCELLENCE

Morello for Government

**A true Web Content Management solution,
Morello is the preferred choice in a rapidly increasing
number of government organizations.**

Morello in Government

Morello provides a wealth of features aimed at the heart of Government. It includes functionality aimed at providing UK government departments with the tools they require to ensure delivery of accessible, well classified, dynamic sites in astonishing timeframes.

Morello Smart Client

Morello has a long track record of successful solutions for a range of UK government departments, agencies and local authorities, reducing overall cost and improving the functionality of their web sites. Projects with customers such as the Home Office, the Department for Transport and the Department for Education and Skills have provided Morello with a huge amount of experience and knowledge that has directly influenced the feature set found in the Morello product suite.

Offering unprecedented user-friendliness, Morello is our office application for managing your content and is just as easy to work with as Microsoft Office or any other office application.

For example, if you want to add a new web page, just select a template from the template set, click OK and off you go.

Rapid Benefit Realization

To enable you to get your first website up and running in the fastest possible time, Morello for Government comes bundled with a Government Site Pack™.

In a standard web implementation process, the key tasks include: user centered requirements capture, information architecture analysis, development of wire frames, graphic design, template creation, content migration, testing and go live.

Using our Site Builder™ together with the Government Site Pack™, we take your project instantly to a stage that could take many weeks with other solutions. Out of the box you are able to choose from predefined standard wire frames, a selection of styles to suit your current branding and create the initial information architecture. Within minutes you can have a working web site that allows you to test out your information architecture concepts, start your content migration tasks, and provide immediate access for your editorial community so that they can start contributing content. Developing your final information architecture, look and feel and custom requirements can then be executed in parallel. This high degree of parallelism drastically reduces the time to make your final site go live.

Instant Site™

For government organizations looking to rollout multiple sites and for those that require a high turnover of microsites, Morello's Site Builder™ enables you to create complete, new, production strength, custom websites in minutes based on your own branding, layout options, and site components. We call this feature **Instant Site™**.

The fully configurable Site Builder™ enables business users to instantly create new department sites, specific Internet sites or even simple microsites for specific events. The types of sites, styles, layouts and business functionality are fully customizable.

As you see, Morello enables you to manage the communications for almost any eventuality, whether it is planned or a complete surprise.

Government Site Pack™

The Government Site Pack™ delivers all the functionality you need to get an initial web site up and running out of the box. This includes components such as A to Z of Services, FAQ's, Events, Committee, News Room, Press Releases, Job Vacancies, Directories, Dynamic Site Map, Legal Notices, Business Directory, Planning Applications, Schools Directory, Societies Directory and Image Map Navigation.

Taxonomy Based Content Classification

All these components are built using Morello best practice consulting and include core functionality such as multi language support, xHTML compliance, conformance to Accessibility Standards, automated meta-data creation, breadcrumbs, built in search, flexible workflow, personalization, dynamic site navigation, text only views, related items, feature links and version control.

The government lays down stringent requirements concerning the categorization and tagging of online content. Government organizations must conform to guidelines such as eGIF and use tools such as the Government Category List.

To help with this, Morello has one of the most advanced taxonomy-based tools available. Morello's Taxonomy Browser enables editorial users to rapidly identify and select the right keywords and phrases to ensure that content is always tagged correctly. It includes a searchable tree-structured representation of the configured taxonomy(s) along with sophisticated facilities like predictive typing and automatic identification of preferred terms. Users are able to identify related terms, view scope notes and see the location, in the taxonomy, of previously used terms. The tool even has "suggest" functionality – a pseudo-intelligent feature to help users find the preferred term.

The UK's Integrated Public Sector Vocabulary (IPSV) is included in the Government Site Pack™ but the Taxonomy Browser can work with one or more taxonomies of your choice.

Morello also provides facilities for automatic creation of metadata, intelligent thesaurus based searches and knowledge management functionality to suggest particular terms that may suit a particular document. This search and meta-tagging functionality, along with the Taxonomy Browser, helps to ensure that your web sites can fully satisfy the UK government standards.

For all types of document

Not only does Morello manage your web content, it also takes care of all your documents. For example, you can easily combine your Microsoft Office, Visio, PDF and any other documents with all other content to populate your website. Authorizations, version control, rollback and workflow are handled by Morello. Both you and your site visitors will also benefit from our built-in search engine, which enables full-text searches on all the documents.

Accessibility

Website accessibility is very important within government. This is not only to comply with legislation such as the Disability Discrimination Act (DDA) but more importantly because it enables the widest possible audience to use their websites. Morello now provides a number of very powerful ways to enable users to create accessible content as well as delivering sites with rich functionality.

The whole problem of accessibility boils down to generating accessible HTML, which is HTML that can be read by the broadest possible audience. Morello is fully optimized for creating accessible HTML. Whether it is through formatting text via our built-in rich text editor, or by copying and pasting any information from other Office applications into it, Morello makes sure the generated HTML is accessible. It does so by filtering the HTML, and by using style sheets. The use of style sheets guarantees optimum compliance to accessibility standards. It is also a means to generate different looks and feels to your site, regardless of whether that is a supplemental text-only version of your site, or an entirely re-branded site. Through these features, Morello helps you meet accessibility standards and offers you optimal flexibility for current and future branding of your sites.

And the great thing is: the Government Site Pack™ has been designed for accessibility. This means you can simply use the Government Site Pack™ with our Instant Site™ feature to create a functionally rich and fully accessible website in minutes.

UK Company

As a UK company with a large and important customer base in the UK public sector including the Home Office, the Department for Transport, the DFES, Learndirect, the Environment Agency and Ofcom, our product development team builds and develops products specific to the UK public sector. This reduces the bespoke development effort required by our public sector customers when implementing our solutions.

We are keen to take feedback from our UK government customers and incorporate suggestions within our product development cycle. For example, we have recently deployed three enhancements to Morello based on suggestions from the Government Office Network project. Our high level of commitment to our client base is a pivotal part of our product strategy.

Standards

Morello is committed to adherence to open standards and actively participates in standardization committees, such as the expert group for JSR170 and JSR283, the Java Content Repository (JCR) specification. Amongst the standards that we support are XML, XHTML, CSS2, JMS, JDBC, JMX, VBA, .NET, WSDL and SOAP.

Supported Platforms

Supported server platforms for Morello version 5.5

Sun Solaris 10 SPARC (Rel 11/06)
Solaris 9 SPARC (Rel 09/05)
Red Hat Enterprise Linux AS/ES 4 x86
Windows Server 2003 (SP1)
Windows XP Professional (SP2)
Microsoft Windows 2000 (SP4)

Database

Oracle 10g R2 32bit or 64bit SE or EE (10.2.0.3)
Oracle 10g R1 32bit or 64bit SE or EE (10.1.0.5)
Oracle 9i R2 32bit or 64bit SE or EE (9.2.0.8)

Server requirements – Recommended minimum

2 GB RAM
Five 18-GB disks (one system disk + four Oracle disks)
600+ MHz UltraSparc CPU (Sun Solaris)
1.8GHz Intel Xeon CPU or equivalent (Windows, Linux)
100BaseT network card

Client software – Operating System

Windows Vista Business (32 and 64bit)
Windows XP (SP2)
Microsoft Windows 2000 (SP4).

Client Software – Supported Office environments for Morello

Microsoft Office XP
Microsoft Office 2003 SP2
Microsoft Office 2000 SR1
OpenOffice.org OpenOffice 1.1
Sun StarOffice 7
